

COMMUNITY API (CAPI)

Easily integrate applications with Avaloq

What is CAPI?

Banking IT applications are becoming more and more fragmented. Often applications require data from Avaloq or want to use existing functionality within Avaloq (such as client opening). Usually these APIs are built from the ground up, which results in high API development costs.

With Community API (CAPI), Avaloq delivers a set of standard APIs, which presents nearly all Avaloq Core Data in a scalable, fast and stable API suite.

Avaloq parameterization is our core competence. Our specialists offer on site technical consulting in the various areas of the Avaloq Banking Suite.

SOLUTION OVERVIEW

With CAPI, Avaloq promises simple, scalable, standardized REST APIs which can be used without the need for additional development efforts.

As system integration experts with many years of experience, we support our clients in the design and implementation of their APIs. In many cases CAPI is a sensible, cost-effective solution that can satisfy a large portion of banking API desires. Our specialists support you in analysis, implementation and coaching regarding all your CAPI related requirements.

SOLUTION ELEMENTS

Analysis of Systems and Interfaces

Support in implementing CAPI and related infrastructure (ACPR, Kafka...)

Coaching in CAPI utilization, such as compound APIs (Shapes), Write APIs etc.

OUR SERVICE

- Identification of your API needs in the context of your existing APIs
- Implementation support of CAPI
- Coaching and implementation of compound APIs and Write APIs as needed
- Hand-over and documentation for your operational readiness
